B&K Precision pwrApp: Wireless Control for XLN-GL DC Power Supplies

B&K Precision introduces the new pwrApp which allows users of the XLN-GL series to monitor and control network-connected (via WLAN) power supplies over local wireless networks. The app supports all XLN-GL power supply functions, plus additional monitoring functions and a simulation mode. Additional features of the App include live visual monitoring and interactive power supply control, visual data graphing and audible trigger alarms within the app.

B&K Precision's pwrApp for iPad and iPhone offers full interface control in English, French, German, Portuguese, Spanish, and Traditional Chinese via a simple selection menu. Future versions of pwrApp will offer control of additional select WLAN enabled B&K Precision power supplies.

iPhone Screenshots

Don't let conventional power solutions slow you down; download the pwrApp free of charge via iTunes today and take control, remotely.
